

Code:

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
int main() {
```

```
    FILE *file;
```

```
    // Open file for writing
```

```
    file = fopen("example.txt", "w");
```

```
    if (file == NULL) {
```

```
        printf("Error opening the file for writing.\n");
```

```
        return 1;
```

```
    }
```

```
    // Write data to file
```

```
    fprintf(file, "Hello, World!\n");
```

```
    fprintf(file, "This is a C file management example.\n");
```

```
    fclose(file);
```

```
    // Open file for reading
```

```
    file = fopen("example.txt", "r");
```

```
    if (file == NULL) {
```

```
        printf("Error opening the file for reading.\n");
```

```
        return 1;
```

```
    }
```

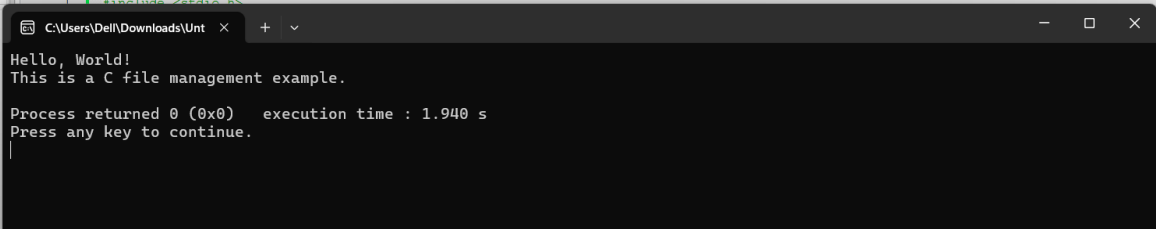

```
    char buffer[100];
```

```
// Read and print file content
while (fgets(buffer, sizeof(buffer), file) != NULL) {
    printf("%s", buffer);
}

fclose(file);

return 0;
}
```

Output:

```
C:\Users\Dell\Downloads\Unt x + v
Hello, World!
This is a C file management example.
